There are a number of different typesets and typeholders available for the Hot QuickCoders.

Typeholders are available in 3R Flat, 4R Flat, Concave and Convex versions.

Typesets are available in a Letter set (A-Z), a Number set (0-9) and a Date set ( 2.5 mm size only).

Typeholders and Typesets

## Typeholders

HQC typeholders are inserted into the HQC coding unit using a removable handle.

They have a special ribbed base in order to be able to insert letters, numbers and logos.

The number of lines achievable and the number of characters per line depends on the size of the characters and the number of ribs used on each character.

In general, the 4R Flat holder is the most often used, the 3R, Concave and Convex holders are more for specialty applications

## Typesets

Typesets are available as Letter Sets, Number sets and a Date set.

All sets have a 2 -rib base with the exception of some custom logos (which can be 3 -rib) and the Date set (1-rib only). Any other 1 -rib sets are custom-made, are not ex-stock and are 30\% more expensive.

Sets are available in sizes from 2 mm to 5 mm , except for the Date set which is available in 2.5 mm only (unless custom-made as above)

1-rib
Date set 2.5 mm characters only

2-rib
All standard sets

3-rib
Special custom-made logos only

## Type Fitment

It is best to have types centered as much as
possible on the holder. When sets are not
centered, uneven or unreliable inking may occur.
1 and 2-rib sets can produce multiple lines as per
the examples below
